

With TallyPrime Server, Run Your Business Uninterrupted

Experience increased productivity, enhanced speed of operations and superior business performance – all without disrupting your flow of work. At Tally, we ensure that when TallyPrime Server is implemented along with TallyPrime, your software keeps functioning the same way as earlier, so that your business transition towards growth is smooth and effortless. TallyPrime Server gives you additional capabilities to handle the growing business needs:

Enabling multiple users to work simultaneously - With TallyPrime Server, multiple users can work faster simultaneously, without impacting each other's access to data. This saves time for the organization so that the resources can be re-deployed in other priority tasks, resulting in optimal productivity.

Security and control brings peace of mind - Get complete control over data and information by restricting the access to data files based on the user accessing it, thereby minimising risks of data misuse and accidental deletion of data.

Monitor tasks and optimize workflow - View real-time information on usage of the system, patterns of user activities and areas where more time is spent. This facilitates reliable and quick decision making, and thus, reducing turnaround time for your business operations.

Zero downtime ensures you're always up and running - Users can continue working on the software even during data maintenance activities such as data backup. It is our assurance that data continuity and reliability will be prevalent even in intense use environments, and there is zero impact of any abnormal client shutdown.
